

Sensitivity analysis to updated Japanese catch data

Mark N. Maunder and Simon Hoyle

Updated Japanese longline catch

- 2004 estimate (18,500 t) was approximately 23% less than the value provided for the assessment (24,000 t). J
- Japanese longline Catch for 2005 is based on monthly reporting and is therefore not effected by the updated data.
- The effort used for forward projections is also a function of the catch in 2004

Analysis

- Baseline catch for northern and southern Japanese longline fisheries were multiplied by 0.77 for all quarters.
- The effort is recalculated using the updated catch data and the projections conducted.
