1994

The Inter-American Tropical Tuna Commission operates under the authority and direction of a convention originally entered into by Costa Rica and the United States. The convention, which came into force in 1950, is open to adherence by other governments whose nationals fish for tropical tunas in the eastern Pacific Ocean. Under this provision Panama adhered in 1953, Ecuador in 1961, Mexico in 1964, Canada in 1968, Japan in 1970, France and Nicaragua in 1973, Vanuatu in 1990, and Venezuela in 1991. Ecuador withdrew from the Commission in 1968, Mexico in 1978, Costa Rica in 1979, and Canada in 1984. Costa Rica rejoined the Commission in 1989.

The IATTC's responsibilities are met with two programs, the Tuna-Billfish Program and the Tuna-Dolphin Program. The principal responsibilities of the Tuna-Billfish Program are (1) to study the biology of the tunas and related species of the eastern Pacific Ocean with a view to determining the effects that fishing and natural factors have on their abundance and (2) to recommend appropriate conservation measures so that the stocks of fish can be maintained at levels which will afford maximum sustainable catches. The principal responsibilities of the Tuna-Dolphin Program are (1) to monitor the abundance of dolphins and their mortality incidental to fishing through the collection of data aboard tuna purse seiners fishing in the eastern Pacific Ocean, (2) to analyze these data and make appropriate recommendations for the conservation of dolphins, and (3) to study the causes of mortality of dolphins during fishing operations and encourage fishermen to adopt the techniques of fishing which minimize these mortalities.

The Commissioners serving at the time of publication are:

COSTA RICA

Jaime Basadre Oreamuno
Alvaro Moreno Gómez
Luis París Chaverri

FRANCE

Philippe Peronne
Jean-Paul Rivaud

JAPAN

Kenro Iino
Minoru Morimoto
Yamato Ueda

NICARAGUA

Sergio Martínez Casco

La Comisión Interamericana del Atún Tropical funciona bajo la autoridad y dirección de un convenio establecido originalmente por Costa Rica y los Estados Unidos. El convenio, vigente desde 1950, está abierto a la afiliación de otros gobiernos cuyos ciudadanos pescan atunes en el Océano Pacífico oriental. Bajo esta estipulación, Panamá se afilió en 1953, Ecuador en 1961, México en 1964, Canadá en 1968, Japón en 1970, Francia y Nicaragua en 1973, Vanuatu en 1990, y Venezuela en 1991. Ecuador se retiró de la Comisión en 1968, México en 1978, Costa Rica en 1979, y Canadá en 1984. Costa Rica se afilió de nuevo en 1989.

La CIAT cumple sus obligaciones mediante dos programas, el Programa Atún-Picudo y el Programa Atún-Delfín. Las responsabilidades principales del primero son (1) estudiar la biología de los atunes y especies afines en el Océano Pacífico oriental para determinar las consecuencias de la pesca y los factores naturales sobre su abundancia y (2) recomendar las medidas de conservación apropiadas para que los stocks de peces puedan mantenerse a niveles que permitan capturas máximas sostenibles. Las responsabilidades principales del segundo son (1) controlar la abundancia de los delfines y su mortalidad incidental a la pesca, mediante la toma de datos a bordo de embarcaciones atuneras de cerco que pescan en el Océano Pacífico oriental, (2) analizar esos datos y hacer recomendaciones adecuadas para la conservación de los delfines, y (3) estudiar las causas de la mortalidad de delfines durante las faenas de pesca e instar a los pescadores a adoptar aquellas técnicas de pesca que minimicen esa mortalidad.

Los Comisionados actuales son:

INTRODUCTION

This report, published in response to the large volume of requests for information received by the IATTC, provides information on the catches, effort, and composition of the purse-seine and baitboat fleets which fished for tunas and tuna-like species in the eastern Pacific Ocean (EPO) in the 1979-1992 period. It does not include data for longline fisheries operating in the EPO; that information may be found in the IATTC's Annual and other reports. The IATTC has published similar data for other periods in its Bulletin series (Shimada, 1958; Alverson, 1959, 1960, 1963; Martin, 1962; Calkins and Chatwin, 1967, 1971; Calkins, 1975; Orange and Calkins, 1981) and in its weekly, quarterly, and annual reports.

Statistical data from IATTC field stations are continuously being collected and processed. While much of the catch information is available within a month or two of a vessel's return from a fishing trip, in some instances it may take a year or more to obtain final information. As a result, estimates of fisheries statistics with varying degrees of accuracy and precision are available. The statistics in this report are the most current and should be used in preference to those presented in previous IATTC publications.

The IATTC maintains records of gear, flag, and fish-carrying capacity for most of the vessels which fish for yellowfin, skipjack, and bluefin tunas in the EPO. Records are not maintained for sport-fishing vessels and other small craft such as canoes and launches. The EPO surface fleets detailed in this report include vessels which fished for yellowfin, skipjack, or bluefin tunas in the EPO during all or part of a year or years. Logbook and landings data used to prepare these statistics have been obtained with the cooperation of vessel owners and captains, shipping agents and processing companies, and various government agencies. Their assistance in providing access to necessary data is greatly appreciated.

Data for both catches and landings are presented in this report. Catches refer to the tonnage of fish brought on board a fishing vessel, and landings refer to the tonnage delivered to the final destination at which it is processed. The final destination may be the port at which the catch was unloaded from the vessel, or it may be a point to which fish were transhipped. Catches and landings normally do not balance within a year, as fish caught in one year may not be landed at a final destination until the following year.

All tonnages are expressed in short tons. Fishing effort is expressed in units of days fishing (the number of fishing days during a trip) or days absent (the number of days, inclusive, from the date a vessel departs on a fishing trip through the date it returns to unload). For statistics reported by 10-degree area, the position given for the area, e.g. 10°S-90°W, refers to the southeastern corner of the area. All statistics reported by 10-degree area are annual statistics. Data on finer spatial and temporal scales (5-degree area by quarter) is available on diskette on request; specific requests for information on other scales should be directed to the Director of the IATTC.

Notes on Tables

The catches in Table 1 are estimates of the total catch by the fleet in the calendar year. These estimates are principally derived from cannery and market unloading weights or, when these are unavailable, from logbook data. In general, about 85 to 90 percent of the annual catch estimates for yellowfin, and 80 to 90 percent of those for skipjack, are based on unloading weights.

The total days fishing in the EPO is reported in Tables 2 and 3. In general the length of fishing trips is known, but in some instances the detailed information concerning fishing effort during a trip, which is normally obtained from logbooks, is inadequate or missing. In such cases, an estimate of days fishing during the trip is made, using general linear models (GLMs). Models have been developed for each year and include factors for flag, trip length and vessel size class, among others. Thus, the purse seine and baitboat days fishing reported in Tables 2 and 3 is the sum of logged days fishing, when available, and GLM estimates of days fishing for trips for which logbook data was not available but of known length.

The data used to develop these GLMs are summarized in Table 6, which includes catch and fishing data for trips for which complete data, including logbooks, were available. The catches reported here are tons landed. Note that these catches do not include very minor amounts of mixed species landings, i.e. catches not identified to species on landing.

The fleet sizes in Tables 7 and 8 include vessels under each flag under which they fished during the year. Details of vessel operations, such as flag changes and changes in ocean fishing areas, are reported in the IATTC's Quarterly Reports. The third-quarter report for each year includes a full list of the fleet, including names, flags, and registered tonnage; this list is updated in other Quarterly Reports. Table 9 reports the number and capacities of vessels in the fleet, with each vessel included only once in a year.

Areal catch and effort data for purse-seine vessels are presented in Table 10, and for baitboats in Table 11. This information is obtained from logbook data. At its finest resolution, days fishing is measured in half-days within a fishing trip. A vessel is considered to be fishing if it is in the fishing grounds and there is no indication that a set could not or would not be made if fish were located. For example, logbook entries indicating transits between areas or to fishing grounds, or mechanical problems, would be used to determine if a vessel was fishing. A logbook entry stating "looking" would unambiguously indicate fishing effort. The number of purse-seine sets, by set type, is reported in Table 10, and includes all known sets. In very rare instances, the logbooks did not indicate the set type, though other set information was obtained. In these cases, set type was estimated following analysis of the intra- and inter-trip fishing patterns for the time and area within which the set was made. Most often, the sets in question immediately followed sets of known type, often on the same school of fish, in which case the missing set type was assumed to be the same as for the immediately preceding set.

Catches from 200-mile Exclusive Economic Zones in the EPO are reported in Table 12. These data are based on areas designated by the Law of the Sea Conference, taking into account subsequent agreements between nations. For catches for which logbook data were not available, assignment to area was based on statistics developed from the logbook database.

INTRODUCCION

El presente informe, publicado como resultado del gran volumen de solicitudes de información recibidas por la CIAT, presenta información sobre las capturas, el esfuerzo, y la composición de las flotas que pescaron atunes y especies afines con red de cerco o carnada en el Océano Pacífico oriental (OPO) en el período de 1979-1992. La CIAT ha publicado datos similares para otros períodos en su serie de Boletines (Shimada, 1958; Alverson, 1959, 1960, 1963; Martin, 1962; Calkins y Chatwin, 1967, 1971; Calkins, 1975; Orange y Calkins, 1981) y en sus informes semanales, trimestrales, y anuales.

Se colectan y procesan continuamente datos reunidos en las oficinas regionales de la CIAT. Se dispone de gran parte de la información de un viaje de pesca pocas semanas después de regresar el barco, pero en algunos casos se puede tardar un año o más en obtener información definitiva. En consecuencia, se producen estimaciones de estadísticas pesqueras de diversos grados de exactitud y precisión. Las estadísticas en este informe son las más actuales y deben ser usadas en lugar de otras publicadas anteriormente por la CIAT.

La CIAT mantiene registros del arte de pesca, bandera, y capacidad de acarreo de la mayoría de las embarcaciones que pescan atunes aleta amarilla, barrilete, y aleta azul en el OPO. No se mantienen registros de barcos de pesca deportiva ni de embarcaciones pequeñas como canoas y lanchas. La flota de superficie del OPO detallada en este informe incluye barcos que pescaron atunes aleta amarilla, barrilete, o aleta azul en el OPO durante todo o parte de un año o años. Se obtienen los datos de bitácoras y descargas usados para preparar estas estadísticas gracias a la cooperación de armadores y capitanes de barcos, agentes marítimos y empresas procesadoras, y varias agencias gubernamentales. Se agradece mucho su ayuda en facilitar acceso a los datos necesarios.

En el informe se presentan datos de capturas y descargas. Las capturas corresponden al tonelaje de pescado cargado a bordo del barco, y las descargas al tonelaje que llega al destino final donde será procesado. El destino final puede ser el puerto donde se descargó la captura del barco, o un lugar al cual fue transbordado el pescado. Generalmente, las capturas y descargas de un año no son equivalentes, ya que el pescado capturado en un año puede no ser descargado en su destino final hasta el año siguiente.

Se expresan los tonelajes en toneladas cortas. Se expresa el esfuerzo de pesca en unidades de días de pesca (el número de días en un viaje en los cuales se pescó) o días de ausencia (el número de días entre la fecha de zarpe del barco para ir a pescar y la fecha de regreso para descargar, inclusive). Para las estadísticas presentadas por área de 10 grados, la posición del área (por ejemplo, 10°S-90°W) se refiere a la esquina sureste del área. Todas las estadísticas presentadas por área de 10 grados son anuales. Se pueden proporcionar, a petición, datos con escalas espaciales y temporales más finas (área de 5° y trimestre) en disquete de computadora; solicitudes específicas de información con otras escalas deben ser dirigidas al Director de la CIAT.

Notas sobre las tablas

Las capturas en la Tabla 1 son estimaciones de las capturas totales de la flota en el año civil. Se derivan principalmente de los pesos de descarga de las enlatadoras y mercados o, de no disponer de éstos, de los datos de bitácora. En general, un 85 a 90% de las estimaciones de la captura anual de aleta amarilla, y un 80 a 90% de aquellas de barrilete, se basan en pesos descargados.

En las Tablas 2 y 3 se detallan los días de pesca totales en el OPO. Generalmente se sabe la duración de los viajes de pesca, pero en algunas instancias es incompleta, o falta, la información detallada sobre el esfuerzo de pesca durante un viaje, obtenida normalmente del cuaderno de bitácora. En estos casos se hace una estimación de los días de pesca durante el viaje, usando modelos lineales generales. Se han elaborado modelos para cada año, los que incluyen factores de bandera, duración del viaje, y clase de arqueo del barco, entre otros. Los días de pesca cerqueros y de carnada presentados en las Tablas 2 y 3 representan la suma de los días de pesca registrados disponibles y estimaciones de los días de pesca en viajes de duración conocida pero sin datos de bitácora.

En la Tabla 6 se resumen los datos usados para elaborar estos modelos; incluye datos de esfuerzo y captura de viajes para los cuales se disponía de datos completos, inclusive los cuadernos de bitácora. Las capturas en la tabla son tonelajes descargados. No incluyen cantidades insignificativas de descargas de especies mixtas, es decir, capturas de las cuales no se identificaron las especies durante la descarga.

Los tamaños de la flota en las Tablas 7 y 8 incluyen a los barcos bajo cada bandera bajo la cual faenaron en el año. En los Informes Trimestrales de la CIAT se detallan las actividades de los barcos, tales como cambios de bandera y de zonas de pesca. El informe del tercer trimestre de cada año incluye una lista completa de la flota, con nombres, banderas, y tonelajes de registro; se actualiza esta lista en los otros Informes Trimestrales. En la Tabla 9 se detallan el número de barcos en la flota y sus capacidades; se incluye cada barco solamente una vez en un año.

En la Tabla 10 se presentan datos de captura y esfuerzo, por área, para barcos cerqueros, y en la Tabla 11 los datos correspondientes para barcos de carnada. Se obtiene esta información de los datos de bitácora. La resolución más fina para días de pesca es en medios días en un viaje de pesca. Se considera que un barco está pescando si está en un área de pesca y no hay indicaciones de que no se realizaría un lance si se localizara pescado. Por ejemplo, se usarían registros de bitácora indicando trasladados a o entre áreas de pesca, o averías mecánicas, para determinar si un barco estaba pescando. Un registro de "buscando" indicaría de modo inequívoco esfuerzo de pesca. En la Tabla 10 se detalla el número de lances cerqueros, por tipo de lance; incluye todos los lances conocidos. En ocasiones muy infrecuentes, un cuaderno de bitácora no indicaba el tipo de lance, pero sí se obtuvo otra información del lance. En estos casos se estimó el tipo de lance a partir de un análisis de la pesca en ese y otros viajes en el período y área en los cuales se efectuó el lance en cuestión. En la mayoría de los casos, los lances de tipo desconocido tuvieron lugar inmediatamente después de lances de tipo conocido, a menudo sobre el mismo cardumen de peces, en cuyo caso se supuso que el tipo de lance que faltaba era igual al inmediatamente anterior.

En la Tabla 12 se detallan las capturas provenientes de Zonas Económicas Exclusivas de 200 millas. Estos datos se basan en las áreas delineadas por la Conferencia sobre el Derecho del Mar, tomando en cuenta acuerdos internacionales subsiguientes. En el caso de capturas para las cuales no se disponía de datos de bitácora, se basó la asignación a un área en estadísticas elaboradas de la base de datos de bitácora.

Flags included in this category are, by year:

- En esta categoría se incluyen las banderas siguientes, por año:
 1979 - Colombia, Congo, New Zealand, Nicaragua, Senegal, Spain, Venezuela
 1980 - Bermuda, Canada, Colombia, Costa Rica, New Zealand, Senegal, Spain, Venezuela
 1981 - Bermuda, Canada, El Salvador, Netherlands Antilles, Portugal, USSR
 1982 - Bermuda, Canada, Colombia, El Salvador, Panama, USSR, Venezuela
 1983 - Bermuda, Canada, Cayman Islands, Colombia, Costa Rica, Panama
 1984 - Canada, Cayman Islands, Colombia, Panama, Spain, USSR
 1985 - Cayman Islands, Colombia, Panama, Spain, USSR, Vanuatu
 1986 - Costa Rica, El Salvador, Panama, Peru, Spain, USSR, Vanuatu
 1987 - Costa Rica, Panama, Peru, Spain, Vanuatu
 1988 - El Salvador, Japan, Republic of Korea, Spain, Vanuatu
 1989 - Costa Rica, El Salvador, Republic of Korea, Spain, Vanuatu
 1990 - Colombia, Costa Rica, Panama, Peru, Spain, Vanuatu, Honduras
 1991 - Colombia, Costa Rica, Cyprus, Honduras, Panama, Peru, Spain, Vanuatu
 1992 - Colombia, Cyprus, Honduras, New Zealand, Panama, Spain

(cont.)

An important part of the work of the Inter-American Tropical Tuna Commission is the prompt publication and wide distribution of its research results. The Commission publishes its results in its Bulletin and Special Report series. The Bulletins contain reports of original research carried out by members of its staff and other scientists. These are reviewed by scientists of other organizations before being accepted for publication. They are issued on an irregular basis, and the volumes are closed when they reach about 500 to 600 pages. The Special Reports contain material other than original scientific research, which is nevertheless of interest to a wide segment of the scientific community.

The Commission also publishes Annual Reports and Quarterly Reports, which include policy actions of the Commission, information on the fishery, and reviews of the year's or quarter's work carried out by the staff. The Annual Reports also contain financial statements and a roster of the IATTC staff.

The Bulletins, Special Reports, and Annual Reports are distributed on an exchange basis to a selected list of governmental organizations, libraries, laboratories, and universities. A nominal cost is set for individuals desiring the publications. Remittances must be in advance, payable in U.S. funds to the order of the Inter-American Tropical Tuna Commission. The distribution of the Quarterly Reports is much more restricted than those of the Bulletins, Special Reports, and Annual Reports, but these may also be purchased. Requests for these publications, as well as a list of all publications, may be directed to the editor.

Some recent publications in the Bulletin series are:

Vol. 20, No. 8—\$2.00

Some observations on bigeye tuna (*Thunnus obesus*) caught by the surface and longline fisheries for tunas in the eastern Pacific Ocean by Thomas P. Calkins, Mineo Yamaguchi, and Naozumi Miyabe, 1993

Observaciones sobre el atún patudo (*Thunnus obesus*) capturado por las pesquerías atuneras palangrera y de superficie en el Océano Pacífico oriental por Thomas P. Calkins, Mineo Yamaguchi, y Naozumi Miyabe, 1993

Vol. 20, No. 9—\$2.00

Growth and age composition of northern bluefin tuna, *Thunnus thynnus*, caught in the eastern Pacific Ocean, as estimated from length-frequency data, with comments on trans-Pacific migrations by William H. Bayliff, 1993

Crecimiento y composición por edad del atún aleta azul del norte, *Thunnus thynnus*, capturado en el Océano Pacífico oriental, estimados a partir de datos de frecuencia de talla, con comentarios sobre migraciones transpacíficas por William H. Bayliff, 1993

Vol. 21, No. 1—\$2.00

An evaluation of length-frequency sampling procedures and subsequent data analysis for purse seine-caught yellowfin tuna in the eastern Pacific Ocean by A. Wild, 1994

Una evaluación de los procedimientos del muestreo de frecuencia de talla y del análisis subsiguiente de los datos de atún aleta amarilla capturado con red de cerco en el Océano Pacífico oriental por A. Wild, 1994

Editor—Redactor
William H. Bayliff

Inter-American Tropical Tuna Commission

La pronta publicación y amplia distribución de los resultados de la investigación forman un aspecto importante de las labores de la Comisión, la cual publica los resultados en su serie de Boletines e Informes Especiales. Los Boletines describen investigaciones originales emprendidas por los miembros del personal y otros científicos. Son revisados por científicos de otras organizaciones antes de ser aceptados para la publicación. Son publicados a intervalos irregulares, y se concluye cada volumen al llegar a unas 500 o 600 páginas. Los Informes Especiales contienen material aparte de investigación científica original, que es sin embargo de interés para una gran parte de la comunidad científica.

La Comisión publica también Informes Anuales y Trimestrales; éstos incluyen información sobre las labores de la Comisión, la pesquería, y las investigaciones realizadas en el año o trimestre en cuestión. Los Informes Anuales incluyen también un resumen financiero y una lista del personal de la CIAT.

Los Boletines, Informes Especiales, e Informes Anuales se envían a base de intercambio a entidades gubernamentales, bibliotecas, laboratorios, y universidades seleccionadas. Se ha fijado un costo nominal para individuos que desean estas publicaciones. Se debe pagar por adelantado en moneda de los EE.UU., remitido a la Comisión Interamericana del Atún Tropical. La repartición de los Informes Trimestrales es más limitada que la de los Boletines, Informes Especiales, e Informes Anuales, pero también se pueden comprar. Se deben dirigir al Redactor los pedidos tanto de estas publicaciones como de la lista de las mismas.

Las publicaciones recientes en la serie de Boletines son:
