1993

AN INDEXED BIBLIOGRAPHY OF PAPERS ON TAGGING OF TUNAS AND BILLFISHES

compiled by

William H. Bayliff

INTRODUCTION

Two working parties, the Working Party on Tuna Tagging in the Pacific and Indian Oceans and the Working Party on Tuna Tagging in the Atlantic and Adjacent Seas, were formed by the Food and Agriculture Organization (FAO) of the United Nations in 1966 (Anonymous, 1966c). The conveners of these working parties were Dr. James Joseph of the Inter-American Tropical Tuna Commission (IATTC) and Mr. Frank J. Mather, III, of the Woods Hole Oceanographic Institution (WHOI). In 1969 it was recommended that the working parties direct their attention toward billfishes, as well as tunas (Anonymous, 1969h: 5). One report (Joseph and working party, 1969) was published by the Pacific and Indian Oceans group and two (Mather and working party, 1969 and 1972) were published by the Atlantic Ocean and adjacent seas group.

The working party on the Atlantic Ocean and adjacent seas was disbanded in 1972, as it was thought that its functions could be carried out adequately by the newly-formed International Commission for the Conservation of Atlantic Tunas. Dr. William H. Bayliff of the IATTC replaced Dr. Joseph as convener of the Pacific and Indian Oceans working party in 1970. Its name was changed to the Working Party on Tuna and Billfish Tagging in the Pacific and Indian Oceans in 1971. In 1985 its purview was expanded to include the Atlantic Ocean and adjacent seas, as recommended by an *ad hoc* group of tuna scientists which met in La Jolla, California, in 1984 (Joseph and Wild, 1984), and its name was changed to the Working Party on Tuna and Billfish Tagging. In 1987 this working party was disbanded by FAO, but it has continued its work informally since then.

Each of the three working party reports included a bibliography of tuna and billfish tagging. The compiler of this bibliography, beginning in 1970, prepared numerous memoranda to the members of the working party, most of which included lists of papers on tuna and billfish tagging which had come to his attention, either directly or through members of the working party. The bibliographies in the three working party reports and the lists of references in the memoranda form the basis for the present bibliography.

The great majority of the references listed in this bibliography were seen by its compiler; the few which were not are indicated by asterisks to the left of the author's name. The Index contains classifications of the references by species, ocean, and subject. In many cases a reference mentions that fish of a particular species were tagged in a particular ocean, but does not discuss any subject, such as growth, mortality, or movements. Such references are included in the list of references, but not in the Index unless there were no references for that species in that ocean which dealt with any of the subjects considered. For example, only two references which briefly mention tagging of *Acanthocybium solandri* could be found, so these are listed in the Index. Scores of such references were found for *Thunnus albacares* in the Pacific and Atlantic Oceans, but since there were also many references for growth, mortality, movement, etc., the references with only brief mention of tagging of that species in those oceans are not listed.

References on materials and methods and on design of tagging experiments are listed at the end of the Index, as these are applicable, in most cases, to more than one species and to any ocean. None of the references with an asterisk to the left of the author's name is included in the Index.

The scientific nomenclature in this report follows the classifications of Collette and Nauen (1983) and Nakamura 1985).

References on tuna and billfish tagging will continue to be collected, and perhaps supplements or new editions will eventually be published. Accordingly, the compiler of this report would appreciate it if new references on this subject, and also references published prior to the time of publication of this bibliography which were overlooked, were brought to his attention.

An appendix, listing suppliers of tagging materials, appears at the end of this volume.

Financial assistance for publishing and distributing this bibliography, obtained from the FAO program, Cooperative Research on Interactions of Pacific Tuna Fisheries, is gratefully acknowledged.
